

- ◆ Why do you have technology on your operation?
  - ◆ Did it come with your equipment?
  - ◆ Did someone tell you it was cool and a great idea?
  - ◆ Did you have a defined purpose/objective?
- ◆ What goals and objectives do you now have for those products in your business?
- ◆ What steps have you taken to integrate the technology into the every day processes of your business?
  - ◆ How do you stay focused in implementation of new tools and processes in the whirlwind of the daily business?
- ◆ What are you doing to take advantage of the value of technology and get the return on your investment?

Vision Technology Management, LLC focuses on the technology business within a farming operation or an agri business.

- ◆ Work with the stakeholders to define expectations and objectives.
- ◆ Evaluate the existing technology tools to ensure the objectives and expectations can be attained
- ◆ Build a business plan to to achieve the objectives and an action plan meet them.
- ◆ Walk through the project to implement the new tools and integrate into everyday workflow
- ◆ Work with client's vendors for tools and training.
- ◆ Research tools that best fit each, individual operation.
- ◆ Research possible new objectives, such as carbon and sustainability, for viability in individual operations.
